

Perfect Udder

The Perfect Udder® Colostrum Management System, is the key to closing all gaps in your colostrum management system by providing a convenient and easy to use colostrum application solution for your dairy farm.

Benefits:

- Improved calf and herd health, improved milk production
- Reduces calf morbidity and mortality
- Reduce the risk of spreading pathogens from the dam or environment to the susceptible gut of the newborn calf
- The patented bag technology allows heat exchange for proper pasteurisation
- Rapid cooling prevents growth of spoilage bacteria
- All in one bio-secure, easy to use, economical bag

Indications:

This management tool was created so that dairy farmers can avoid the pitfalls of recontamination of quality colostrum, as well as provide a feeding system that eliminates the labour of cleaning along with the dangers of dirty vessels.

These goals are accomplished with the uniquely designed metallic bag that is robust enough to handle 2-4 litres of colostrum, yet refined enough to permit pasteurization within the bag. Refrigeration, freezing and thawing are all steps that occur within the clean confines of the single use bag.

PROVEN PASTEURISATION
SYSTEMS FOR MILK AND
COLOSTRUM

Dosage and Directions:

Every colostrum bag is single use: clean and correct dose. Improve employee compliance by feeding one bag per calf, then discard without the worries of proper cleaning.

Directions for use:

- Collect colostrum
- Heat-treat/pasteurize colostrum in Perfect Udder® bags or in a tank, then fill the Perfect Udder® bags
- Refrigerate or freeze the Perfect Udder® bags filled with pasteurized colostrum
- Warm the Colostrum in a Perfect Udder® pasteuriser or warmer
- Feed colostrum by attaching a nipple or esophageal tube to the bag

Pack size: 4 litre.

Accessories:

The Perfect Udder® system provides all of the below accessories to complete the job with little effort.

Economy and Deluxe Bag Fillers

Simple way to get raw product into the bag

Feeding System

For a convenient and easy application, you have the choice of either calf friendly nipples, or a sturdy and easily placed esophageal feed tube
