

GESTAVET® GnRH

agilis

Gestavet-GnRH:

Gonadorelin is the synthetic analogue of the gonadotropin releasing hormone (GnRH) and acts by stimulating the synthesis of and release of Luteinising Hormone (LH) and Follicle stimulating hormone (FSH) from the anterior pituitary gland.

Summary:

Use in cows and heifers for induction and synchronisation of ovulation, reduction of the post-partum anovulatory period, improvement in post-partum fertility and the treatment of ovarian cysts.

Composition:

Gonadorelin (acetate) 0.1mg/ml in a solution for injection.

Available in 50ml and 100ml bottles.

Dosage:

1ml by intramuscular injection for all indications (equivalent to 0.1mg gonadorelin/animal) in a single dose.

Nil meat and milk withholding.

Store between 2-8° C. Temperature controlled to maximise bioavailability of the product.

Stored in original container, product has a shelf life of 28 days following broaching of the bottle.

Keep out of reach of children.

Contraindications and special precautions:

Do not administer to an animal with hypersensitivity to gonadorelin. Do not administer to dairy cows until 20-30 days post-partum because the ovary is not receptive.

Avoid contamination by using sterile equipment when administering the product.

Avoid contact with skin, wash hands upon exposure. It is advisable to wear gloves when using this product.

REPRODUCTIVE HORMONE IN AN INJECTABLE SOLUTION.

RESTRICTED VETERINARY MEDICINE
REGISTERED PURSUANT TO THE ACVM ACT 1997, NO A10767
